

VIGRE Graduate Fellowship Progress Report
Fall, 2001

Anthony J. D'Alesandro

This is a report of progress in fulfillment of the VIGRE graduate fellowship for the fall, 2001 semester.

For fall, 2001, I received a half VIGRE graduate fellowship and a half Teaching Assistantship. This is my first year in the Applied Mathematics program. As a first year student I am expected to take 10 units of core classes each semester. Since I am new to the program I am not doing research and I do not have an advisor. My primary duty is to complete my core courses and prepare for the written qualifying examination this coming August. Upon successful completion of this process I can then proceed to research. For the fall, 2001 semester I was registered for 10 units. The courses and grades are as follows:

MATH-527A	Principles of Real Analysis	C (3 units),
MATH-575A	Numerical Analysis	A (3 units),
MATH-583A	Methods of Applied Mathematics	B (3 units),
MATH-586A	Research Topic Group Applied Mathematics	A (1 units).
